

Greenday offer a comprehensive range of drainage services for both domestic & commercial sectors

## WHAT ARE GREASE TRAPS?

Also known as Grease Interceptors, grease traps are designed to intercept fat, oil and grease (common know as FOG) by slowing down the flow of the hot water and grease to allow them to separate. The grease flows to the top as the water cools down trapping the grease before entering the sewer system, helping to avoid severe blockages in the drains. Greenday Environmental works with the food sector to offer bespoke grease traps including installation and maintenance services.

## WHY USE A GREASE TRAP ?

We use the latest technology and equipment to monitor and maintain your interceptor tanks or grease traps. Why?

- To prevent pipeline and sewer blockages
- To prevent pumping station failure
- To ensure sewage treatment plants operate and effectively

## SOLUTIONS

Greenday provides two solutions for the maintenance of Grease traps:

- Bacteria solutions approved by Dublin city councils
- Emptying & cleaning by vacuum tankers

## BACTERIA AND GREASE ENZYME MAINTENANCE

Standard Operation Procedure (SOP) for maintenance:

- Check drum and quality of bacteria and Grease Enzyme
- Refill Drum with bacteria and Grease Enzyme
- Check Pipe line to and from drum to ensure there are no kinks or blockages in the line.
- Check pump is running and dispensing the correct quantities of bacteria and Grease enzymes at correct times
- Check the pump is operating with the correct date and time
- Inspect Grease trap to ensure that there is no build-up of FOG in the trap
- Update Grease maintenance Log
